

A Conference in Honor of the 60th Birthday of Jochen Brüning

TIME:

2 Nov 2007, 14:30 - 3 Nov 2007, 13:30

LOCATION:

HU-Berlin Unter den Linden 6 Raum 3038 (Weierstrass Hörsaal)

PROGRAM:

2 Nov 2007

14:30 - 15:20 Werner Ballmann

Remarks on joint work with Jochen Brüning

15:30 - 16:20 **Matthias Lesch**

Differential operators of Fuchs type

I will review some of the work by Brüning, Seeley and myself on elliptic operators on manifolds with conic singularities. I will also mention some recent developments.

16:20 - 17:00 Coffee Break

17:00 - 17:50 Paolo Piazza

Rho invariants in topology and differential geometry

Rho-invariants are secondary invariants of Dirac operators; the aim of this talk is to survey the basic results in the field, explain their interest and announce a few recent results about their generalization to the foliated context. More precisely, let G be a discrete group and let M be a closed oriented manifold with fundamental group G. I will consider various rho-invariants associated to the signature operator on M and to the Dirac operator (in the spin case) : the Atiyah-Patodi-Singer rho invariant, the Cheeger-Gromov rho-invariant and the delocalized rho-invariant of Lott. I will talk about the behavior of these rho-invariants under deformation of the metric, or of the differentiable structure or of the homotopy type of the manifold: rather surprisingly, this behavior depends on the nature of the fundamental group of the manifold and is radically different depending whether the group G has torsion or is torsion-free. In the last part of my talk I will move to measured foliations and announce recent results in collaboration with Moulay Benameur.

18:00 - 18:50 Xiaonan Ma

Berezin-Toeplitz quantization and symplectic reduction

As an application of our asymptotic expansion of the G-invariant Bergman kernel on a symplectic manifold with a Hamiltonnian group action G, we study the Berezin-Toeplitz quantization under the symplectic reduction.

- 19:30 Conference Banquet
- 3 Nov 2007
- 8:30 9:00 Petit déjeuner
- 9:00 9:50 Jean-Michel Bismut

The hypoelliptic Laplacian

10:00 - 10:50 Kenji Ueno

Conformal Field Theory and Modular Functor

- 10:50 11:40 Brunch
- 11:40 12:30 Sergey Dobrokhotov

Propagation of Gaussian wave packets in quantum thin periodic waveguides with nonlocal nonlinearity

12:40 - 13:30 Henri Moscovici

Index theory and Hopf algebra symmetry
