

SFB-Seminar (Teilprojekt C5) und Vollversammlung

ZEIT:

12.7.2016, 14:30 Uhr - 18:00 Uhr

ORT:

IRIS-Haus 2.07, HU Berlin

PROGRAMM:

14:30 - 15:00 Kaffeepause

15:00 - 15:30 SFB-Vollversammlung

15:30 - 16:30 **Prof. Dr. Marcus Spradlin (Brown University)**

Cluster algebras and scattering amplitudes

Scattering amplitudes of planar N=4 supersymmetric gauge theory are functions with remarkable mathematical properties. The manifold of kinematic data for an n-particle scattering process is an example of a type of space known as a cluster Poisson variety, and it has been discovered that there is a deep connection between amplitudes and the associated $\text{Gr}(4,n)$ Grassmannian cluster algebra. I will review various aspects of this connection and show how exploiting these mathematical properties can greatly aid the computation of previously unknown amplitudes.

16:30 - 17:00 Kaffeepause

17:00 - 18:00 **Dr. Congkao Wen (Universita di Roma)**

Constraining effective actions via scattering amplitudes

I will discuss how the consistent conditions arising from scattering amplitudes can be utilized for constraining low-energy effective actions. In particular in this talk I will focus on the effective action of N=4 super Yang-Mills theory in the Coulomb branch. The constraints
