

SFB-Seminartag

ZEIT:

5.6.2006, 14:00 Uhr - 17:00 Uhr

ORT:

Humboldt-Universität zu Berlin
Unter den Linden 6
Hauptgebäude, Hörsaal 3075
10099 Berlin

PROGRAMM:

14:00 - 15:00 **Dr. Dario Martelli (CERN Genf)**

AdS/CFT-inspired Sasaki-Einstein geometry

The AdS/CFT correspondence motivates the study of Sasaki-Einstein manifolds, and their associated non-compact Calabi-Yau cones. I will discuss aspects of these geometries, and their relation to properties of the dual superconformal field theories. In particular, I will discuss the geometric counterpart of α -maximization in terms of a problem of volume minimisation. I will show how the case of toric manifolds can be treated with elementary methods based on the underlying convex polytopes. The general case requires more sophisticated techniques involving localisations, and yielding a relation to an equivariant index theorem.

15:30 - 16:30 **Prof. Dr. Jan Plefka (HU Berlin)**

The AdS(5)xS(5) superstring in light-cone gauge
